

## How to give my opinion on a film

## Teacher's model

I liked the film entitled Terminator because I found it both interesting and thrilling. I preferred the first one of the series because the idea was new and the plot better build than in the two others.

What I liked best was the general atmosphere. I was thrilled by the plot because there was a lot of suspense but also humorous situations.

I think the character of the robot Terminator, was the most convincing because the actor performed so truly and was so handsome too.

I found that the character of the little boy was funny as well when he taught slang to the robot !

But I couldn't really identify with any of the characters because it was a science-fiction film and the action was too far from real life.

The passage I enjoyed the most was when the robot arrived from the future, in the nude, and agressed rockers in a pub to get their clothes, because the scene was a parody of action films and it was, no doubt, funny! The passage I most disliked was the end because I wanted to know what was going to happen next, of course !

I liked it so much that I bought the DVDs of the trilogy as soon as they were released! I think I really like this kind of film, I mean science-fiction films, because they allow us to dream of another world or of the future of our own world. They do not limit our imagination, for the future is in itself a world in which everything is possible. Reality is too boring or violent, even the news is like a horror story nowadays.
